Image 1: Hörmann is expanding its range of storage space systems with the new Juno tool sheds. They are available in two designs, two roof shapes and many sizes and offer a modern, high-quality storage space system for the garden or patio.

Storage space system range expanded New Juno tool sheds from Hörmann

Hörmann is continuously expanding its still young product range of storage space systems and is now launching a completely new series of tool sheds onto the market. The Juno tool sheds offer high-quality storage space for outdoor use and can be customised by the end customer. This is achieved by offering a combination of two styles, two roof shapes, three modern colours and up to 14 different sizes.

Many houses are constructed without basements to save on costs. Nevertheless, homeowners often have items that they want to keep safe and dry outside the living area. Tool sheds are a practical solution for additional storage space outdoors. They are ideal for storing garden equipment, tools, bicycles, furniture and much more. With the new Juno series, Hörmann is expanding its existing range of tool sheds and offering end customers even more choice and design options for their storage space in the garden or on the patio.

Robust and long-lasting

In contrast to timber tool sheds, all Hörmann tool sheds are made of robust, single-skinned sheet steel that is galvanized and has a high-quality coating. The tool sheds have a coil coating on both sides, making them weather- and mould-resistant, UV-resistant and non-flammable. They are also

extremely easy to clean and do not require any repainting. Juno tool sheds are offered CO₂-neutral as standard.

Wide range of design possibilities

Juno tool sheds offer a wide range of design possibilities. They are available in two roof shapes – flat roof and gable roof – and in two designs: Modern and Design. These have a wide, vertical pattern that looks particularly elegant and modern. With a large selection of sizes (flat roof with 11 sizes and gable roof with 14 sizes) and three external colours – Grey aluminium RAL 9007, Anthracite grey RAL 7016 and Titan Metallic CH 703 – Juno tool sheds can be customised to suit individual requirements. It is also possible to design the roof and door sets in a different colour to the rest of the tool shed.

The concealed hinges, available exclusively from Hörmann, invisibly connect the door leaf to the door frame and ensure a harmonious appearance. The mechanical hold-open devices are included in the scope of delivery to allow controlled opening and closing. The door can be configured to open either left or right and has a double-skinned design.

Individual accessories

All Juno tool sheds can be individually expanded both on the inside and outside with matching accessories. Two shelf rails, a shelf and two coat hooks are included in the scope of delivery. The standard equipment for the tool shed with a flat roof includes two drainpipes. Various shelving variants and holders for tools, devices and bicycles help to make optimal use of the space. There is also the option of integrating half-height or full-length glazing with 4 mm thick laminated safety glass to let more light into the tool shed. A drainpipe or hose set can also be used for rainwater collection outside. The optionally available threshold ramps make it easy to slide lawn mowers, wheelbarrows or bicycles in and out.

(3413 characters incl. spaces)
