Image 1: The design of the Quadro focuses particularly on natural, high light incidence and creates a bright and friendly room atmosphere.

New internal door Quadro from Huga

Timber frame door combines transparency and stability

Bright, light-flooded living spaces are very popular with architects, building owners and property developers. With the new Quadro internal door, timber door manufacturer Huga is expanding its range with a modern timber frame door that elegantly combines timber and glass. The sturdy timber frame encloses a glass pane over the entire surface, which allows for more natural light and high transparency, while the timber frame provides stability. In combination with the ProLock Planar Euro lever handle, the result is a minimalist door view without drilled key hole.

The design of the new Quadro internal door stylishly combines timber and glass. The glass pane over the entire surface allows more light to enter and ensures a high level of transparency while making the rooms appear larger. It is enclosed by a stylish, sturdy timber frame with a high-quality real lacquer surface finish for added stability. What makes it so special is that the glass is already fitted at the factory, ensuring easy fitting and high-quality processing. Building owners and property developers can choose from a wide range of glass variants: from clear glass and tinted glass to modern loft designs with black lines in the glass. However, it's not just the different glass variants that offer a great deal of design options, but also the real lacquer surface finish of the timber frame. In addition to the six preferred colours of white, grey, "Hygge" grey, taupe, anthracite and black, almost all colours from the RAL K5 colour fan (RAL to choose)

are available. According to the manufacturer, the paintwork is not only easy to clean, but also resistant to the effects of everyday use such as humidity and dirt. The Quadro internal door is available in flush version, which further enhances the minimalist design.

The internal door can be equipped with the innovative ProLock Planar Euro lever handle for a particularly minimalist door view. The lever handle is characterised by its minimalist look with a flush-fitting rose escutcheon and is available in round and angular versions. With the locking elegantly integrated into the lever handle, the door can be conveniently locked and unlocked with just one hand. If necessary, the door can be opened from the opposite side using the integrated emergency release. The ProLock Planar is available in high-quality stainless steel or modern Jet black matt. Thanks to the rose escutcheon glued in at the factory, the lever handle can be fitted quickly and easily on the square pin. It is very robust and designed for heavy-duty use. An adjustable lock plate with integrated noise damping ensures that the door closes quietly and gently. A particularly special detail is the so-called disc cut, which not only provides a pleasant feel, but also prevents clothing or bags from getting caught on the lever handle.
